Appendix G List of Acceptable Documentation Types

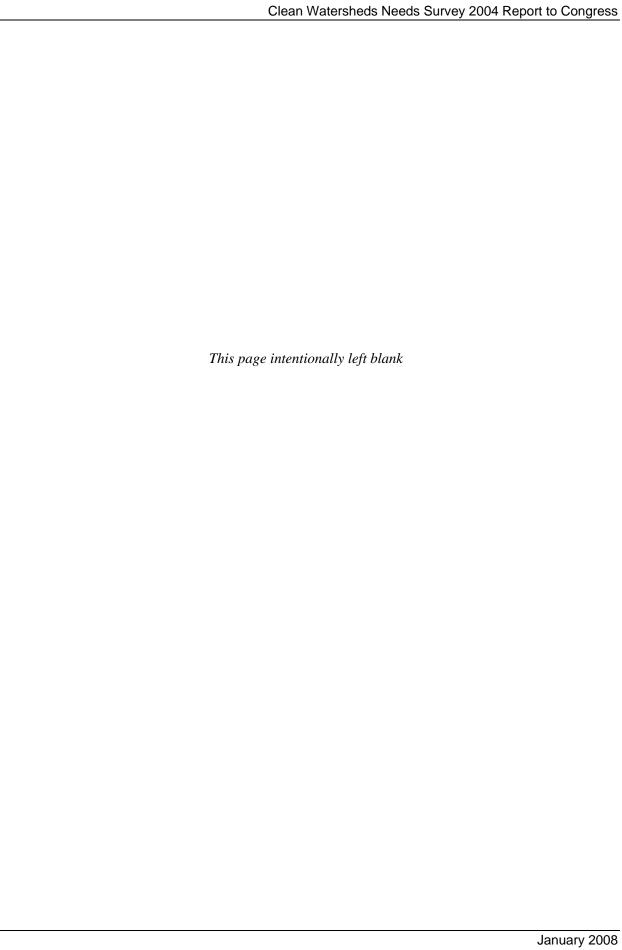

Table G-1 lists the document types that were acceptable for justifying needs or costs for the CWNS 2004. It also provides the percentage of total needs that were documented with each document type.

	Allowable for Justification of		Percent of
-	Need	Cost	_ Total Documented
	Neeu	Cost	Needs in
Documentation Type			Table A-1
1. Capital Improvement Plan	Yes	Yes	43.3
A capital improvement plan is a fiscal planning document used by cities that			
usually spans 1 to 20 years. It contains project- and cost-specific information and is			
sometimes referred to as a Master Plan. The capital improvement plan must			
adequately address why the project is needed and provide costs that are project-			
specific.			
2. Infiltration/Inflow (I/I) Analysis	Yes	Yes	< 0.1
An I/I analysis is a document that identifies excessive flow problems due to			
infiltration or inflow into the sewage conveyance system. The I/I analysis itself may			
be contained in a facility plan, a sewer system evaluation survey or a combined			
sewer overflow report.			
3. Sewer System Evaluation Survey (SSES)	Yes	Yes	0.9
An SSES is a document that contains the results of a sewer system survey, manhole	100	100	0.5
inspection, smoke testing and flow monitoring. It is used to evaluate the physical			
condition of a sewer system and identifies areas of combined sewers, downspout			
connections and locations where the sewer system is at capacity. In many cases, a			
combined sewer overflow study is placed in this category.			
4. Final Engineer's Estimate	Yes	Yes	5.9
The final engineer's report is typically submitted as a result of a detailed facility			
design. It contains a specific description of the project scope and a list of work to be			
done with detailed itemized costs.			
5. Cost of Previous Comparable Construction	No	Yes	0.4
This estimate of cost must be based on the cost of a recently completed project that			
is similar in size, scope and location and for which detailed construction cost data			
are available. This document may be used to justify costs if stringent guidelines are			
followed and the costs are project-specific.			
6. Facility Plan	Yes	Yes	17.3
Excerpts from a facility plan are acceptable forms of documentation to justify a			
need and to update cost estimates. The facility plan contains project-specific			
information, and typically several alternatives are presented, including one			
recommended alternative. Only information covering the recommended alternative			
may be used to document a need and a cost estimate.			
7. Plan of Study	Yes	Noa	< 0.1
This documentation type must be an official project description. Any type of			
preliminary engineering study done before more detailed planning to assess the			
scope and feasibility of the project is categorized as a Plan of Study. It may be used			
only to document the need.			

Allowable for Justification of Need Cost Needs Needs Table A Nee	al ented
Need Social Documentation Type Intended Use Plan (IUP) The IUP, which is prepared annually, uses State-assigned criteria to rank projects or which Federal funding assistance is being sought during the current Federal iscal year. The primary purpose of the IUP is to identify proposed annual intended sees of the amounts available to the CWSRF. A section 212 project listed in the UP must be on the State Priority List to be eligible for CWSRF funding; a section 19 or 320 activity is not required to be on the State Priority List unless the activity is considered to be nontraditional NPS pursuant to the Funding Framework;	ented

19 or 320 activity is not required to be on the State Priority List unless the activity s considered to be <i>nontraditional</i> NPS pursuant to the Funding Framework;	
s considered to be nontraditional NPS pursuant to the Funding Framework;	
owever, such activities must be listed on a State's IUP for funding to occur.	
. State-Approved Area-wide or Regional Basin Plan Yes Yes ^b 1.5	í
The Clean Water Act's section 208 and 303 Regional Basin Plans are broad-based	
vater quality management plans written to identify future planning for areas in a	
tate. Only section 208 and 303 documents that contain site-specific information	
nd a description of a need may be accepted as documentation of need.	
Occumentation of cost is assessed case by case depending on the amount of detail	
eported and the source of the information.	
0. Grant Applications and CWSRF Loan Applications Yes Yes 2.3	;
ederal or equivalent State grant applications or CWSRF applications may be used	
document needs and to update costs for the categories in which the grant or loan	
noney is requested. Applications should contain sufficient clearly written narrative	
nat defines the specific project and the water quality or public health problem. If an	
quivalent State grant program application is used as documentation, the form must	
e submitted.	1
1. State Project Priority List Yes No < 0.1	1
The State Priority List ranks projects by State-assigned criteria for which Federal	
unding assistance is being sought. States may select projects from the State riority List for inclusion in the Intended Use Plan (IUP) regardless of the rank of	
ne project on the State Priority List. States are not required to develop a new	
WSRF priority list each year; they may develop a single multiyear CWSRF	
riority list, which could be considered their current list and the list need not be	
pdated annually. Because the <i>fundable</i> portion of the State Priority List is usually	
included in a State's IUP and there is ambiguity in defining the <i>fundable</i> and	
lanning portion of the State Priority List, as well as the State-to-State variability in	
ne lists, only the State's current State Priority List may be used to justify need (and	
ot cost).	
2. Diagnostic Evaluation Yes No < 0.1	1
diagnostic evaluation is usually performed when a facility cannot achieve	
ffluent discharge permit limits or when it experiences design, operational,	
nalytical or financial problems that limit the performance of the facility. This type	
f evaluation may be used to document a need if the results indicate that	
onstruction is necessary to achieve compliance.	
3. Administration Order/Court Order/Consent Decree Yes No < 0.	1
hese official documents are usually issued as the result of continued violation of a	
National Pollutant Discharge Elimination System permit or other pollution control	
equirements. The order or decree must state a need for construction to correct the	
equirements. The order or decree must state a need for construction to correct the iolation to document the need. Cost curves may be used to calculate associated osts.	

Table G-1. CWNS 2004 List of Acceptable Documentation Types (continued)			
	Allowable for Justification of		Percent of
-	Need	Cost	Total Documented
Documentation Type	11000	Cost	Needs in Table A-1
14. Sanitary Survey	Yes	No	0.1
A Sanitary Survey is a logical, investigative approach to gather information to	105	110	0.1
evaluate the condition of existing onsite wastewater systems. The sanitary survey			
must document high area-wide failure rates that are considered serious enough to be			
a health hazard (such as ground water contamination caused by malfunctioning			
septic tanks) to document a need. The documentation must clearly state that onsite			
failures are contributing to a water pollution or health-related problem. EPA			
reviews this documentation case by case.		h	
15. State-Approved Local/County Comprehensive Water and Sewer Plans	Yes	Yes ^b	1.3
These plans are similar to State-Approved Area-Wide Basin Plans. These local			
plans also cover fairly large areas and might not contain project-specific information. These local plans must clearly identify a water quality or health-			
related problem and must be project-specific to be acceptable as documentation.			
16. State Certification of Excessive Flow	Yes	No	
This document may be used to demonstrate that a need exists for infiltration/inflow	105	110	
correction.			
17. State-Approved Municipal Wasteload Allocation Plan	Yes	Yes ^b	< 0.1
A Municipal Wasteload Allocation Plan is a water quality analysis used to			
determine the level of treatment required by a specific project, which is ultimately			
translated into an effluent limitation or BMP for the National Pollutant Discharge			
Elimination System permit. These plans may be used to justify the need for a			
treatment plant enlargement or upgrade as long as the study identifies a specific			
sewage treatment point source and appropriate design flows and treatment levels. This plan may be used to document a need and may be used to update costs if the			
project descriptions identify specific costs.			
18. Total Maximum Daily Load (TMDL)	Yes	No ^c	< 0.1
A TMDL is an estimation of the maximum amount of a pollutant that a waterbody			
(one listed on a State's 303(d) list) can receive and still meet water quality			
standards, and it includes an allocation of the allowable pollutant discharge amount			
to different point and nonpoint sources. Project-specific needs should be identified.			
If used to justify costs, TMDL Reports or TMDL Implementation Plans containing			
cost data will be reviewed case by case.	***	3.7	0.1
21. National Pollutant Discharge Elimination System (NPDES) or State Permit Requirements (with Schedule)	Yes	No	< 0.1
NPDES is a permitting program implemented under authority of the Clean Water			
Act and designed to control point source discharges of pollution. Facilities not			
meeting effluent limitations and compliance schedules or facilities <i>required</i> to plan			
because they are at or near plant capacity may submit documentation under			
documentation type 21.			
22. Municipal Stormwater Management Plan	Yes	No^{c}	0.2
A Municipal Stormwater Management Plan is a plan that describes a proposed			
municipal stormwater management program as part of a municipality's NPDES			
stormwater permit application. It includes a description of structural and source			
control measures that are to be implemented to (1) reduce pollutants in runoff from commercial and residential areas that is discharged from the storm sewer, (2) detect			
and remove illicit discharges and improper disposal into storm sewers, (2) detect			
pollutants in runoff from industrial facilities that discharge to municipal separate			
storm sewers, (4) reduce pollutants in construction site runoff that is discharged to			
municipal separate storm sewers, and (5) enhance municipal maintenance, public			
education and public involvement.			

Table G-1. CWNS 2004 List of Acceptable Documentation Types (continued)			
	Allowable for		Percent of
_	Justification of		_ Total
	Need	Cost	Documented Needs in
Documentation Type			Needs in Table A-1
23. Nonpoint Source Management Plan/Assessment Report	Yes	No ^c	-
A Nonpoint Source Management Plan is a 4-year plan developed by a State to			
address nonpoint source pollution problems. Elements of the plan include			
identification of the best management practices and measures to reduce pollutant			
loading; programs to achieve implementation; a schedule with annual milestones,			
costs, and identification of specific projects; certification that the laws of the State			
will provide adequate authority to implement the plan; and sources of funding and			
assistance. A Nonpoint Source Assessment Report assesses the extent of pollution			
due to diffuse or nonpoint sources within a State. The report identifies navigable			
waters that require nonpoint source controls to achieve Clean Water Act water			
quality standards, sources and amounts of such pollution, and State and local			
control programs. It also describes the process that will be used to identify best			
management practices. EPA will consider other documentation, such as nonpoint			
source grant applications and States' surveys, case by case.			
24. Nonpoint Source Management Plan/Ground Water Protection Strategy	Yes	No ^c	-
States may use a Comprehensive Ground Water Protection Strategy to document			
nonpoint source needs if the strategy is part of a Nonpoint Source Management			
Program. The goals of this major Federal initiative addressing ground water			
protection are to strengthen State ground water programs; deal with significant,			
poorly addressed ground water problems; create a policy framework within EPA			
for the guidance of ground water policy; and strengthen the ground water			
organization within EPA. Included in such a strategy are programs established			
under the Safe Drinking Water Act such as regulation of the injection of wastes into			
deep wells, the Wellhead Protection Program, and the Sole Source Aquifer			
Program. Provisions in the Resource Conservation and Recovery Act for leaking			
underground storage tanks, goals in the Comprehensive Environmental Response,			
Compensation, and Liability Act for contaminated ground water sites, and State			
grant programs in the Clean Water Act for ground water protection activities are			
covered by this strategy.			
25. Nonpoint Source Management Plan/Wellhead Protection Program and	Yes	No^{c}	-
Plan			
A Wellhead Protection Plan may be used to document nonpoint source needs if it is			
part of a Nonpoint Source Management Program. As part of its overall ground			
water protection strategy, each State must delineate wellhead protection areas for			
wells or well fields used for public water supply. Contaminant sources within the			
wellhead protection area must be identified and a management plan developed to			
protect the water supply in that area from contamination. Contingency plans for each public water supply system must be developed to ensure an appropriate			
response in the event that contamination occurs, and standards must be established			
for locating new wells so as to minimize the potential for contamination of the			
water supply.			
26. Nonpoint Source Management Plan/Delegated Underground Injection	Yes	No ^c	
Control Program Plan	105	110	
A State may document needs to address nonpoint source aspects of a Delegated			
Underground Injection Control Program Plan if it is part of the State's Nonpoint			
Source Management Program. As part of the Safe Drinking Water Act, EPA and			
State Underground Injection Control Programs were established to protect potential			
underground sources of drinking water from contamination by injection wells.			
			-

Table G-1. CWNS 2004 List of Acceptable Documentation Types (continued)			
	Allowable for		Percent of
	Justification of		Total
	Need	Cost	Documented
			Needs in
Documentation Type			Table A-1
27. Estuary Comprehensive Conservation Management Plan (CCMP)	Yes	No^{c}	-
A CCMP is a management plan developed for an estuary that has been nominated			
for the Clean Water Act section 320 National Estuary Program. The CCMP			
summarizes findings, identifies and establishes a priority for addressing problems,			
determines environmental quality goals and objectives, identifies action plans and			
compliance schedules for pollution control and resource management, and ensures			
that designated uses of the estuary are protected.	X 7	***	0.1
28. Funding Applications (applicable only for communities with populations of fewer than 3,500)	Yes	Yes	0.1
All applications for funding (with signed agency review sheets, e.g., Rural			
Economic and Community Development—formerly Farmers Home			
Administration, Community Development Block Grant—Housing and Urban			
Development) other than State Revolving Funds are acceptable for need. The			
application is acceptable for cost if an engineering report is reviewed by qualified			
State project staff.			
29. State Needs Surveys (applicable only for communities with populations of fewer than 3,500)	Yes	Yes	0.3
All State Needs Surveys are acceptable for documenting <i>need</i> if:			
• A local government official's signature is included (<i>local</i> means city,			
community, town, borough, village or county)			
Information describing the problem is attached			
• Information describing prior or ongoing planning efforts and descriptions of the			
cost-effective control option are offered			
State Needs Surveys are acceptable for documenting <i>cost</i> if a cost estimate that has			
been prepared and signed by an engineer or engineer circuit rider is attached. The			
cost estimate need not be as detailed as that found in a facility plan, but it must			
include the engineer's rationale for the estimate. Qualified State project staff must			
also sign a Statement of Cost Reasonableness after reviewing the estimate.	3 7	X 7	0.2
30. Model Survey (applicable only for communities with populations of fewer than 3,500)	Yes	Yes	0.3
Use of a standard or <i>model</i> survey form is acceptable for documenting need (and			
cost) as long as appropriate signatures are included. If costs are not included, cost			
curves may be used.			
31. Information from an Assistance Provider (applicable only for communities	Yes	No	< 0.1
with populations of fewer than 3,500)	103	140	< 0.1
A statement of need from a technical assistance provider (e.g., State training center,			
health department, circuit rider) along with a soils/geologic report may document			
need for communities. Local official and provider signatures must be included.			
Cost curves may be used to document costs.			
32. Vulnerability Assessments for Homeland Security Needs	Yes	No ^c	-
This document may be used to assess needs and might have information that can be			
used to justify costs. Cost justification for Categories I–VII must be project-specific			
and distributable among categories. The document should be submitted to the			
contractor to determine whether the costs are eligible.			

	Allowable for Justification of		Percent of Total
	Need	Cost	Documented Needs in
Documentation Type			Table A-1
35. New State or Federal Regulation	Yes	No	-
This documentation is for new State or Federal regulations, not future or proposed			
ones. New regulation documentation documents a need but not cost. It is expected			
that states use cost documentation such as Cost of Previous Comparable			
Construction or, when appropriate, CWNS 2004 cost curves to develop costs. Note			
that State-generated general cost factors applied to all affected facilities are not			
acceptable for documenting costs.			
36. Combined Sewer Overflow Long-Term Control Plan (LTCP)	Yes	Yes	3.6
A plan, comparable to a facility plan, that describes long-term control measures for			
combined sewer overflows. Quality may vary across States. Documentation must			
be submitted.			
40. Approved State Annual 319 Workplans	Yes	No ^c	-
These are Nonpoint Source Management Program workplans approved for section			
319(h) funding.			
41. Approved State 319 Project Implementation Plans	Yes	Yes	-
These are Nonpoint Source Management Program project implementation plans			
approved for section 319(h) funding.			
98. Combined Sewer Overflow Cost Curves	NA	Yes	14.5
Though not actually a document, these cost curves are an approximation of costs to			
control combined sewer overflows. Because combined sewer overflows are public			
health threats, the needs to control them are automatically justified.			
99. EPA-HQ Approved	Yes	Yes	2.8
These are documents preapproved by EPA headquarters. Some examples are			
Nutrient Reduction Technology Cost Estimations for Point Sources in the			
Chesapeake Bay Watershed, 2001-2003 Community Preservation Plan for the			
Town of Southampton and Blackstone River Fisheries Restoration Plan			

NA = not applicable.

^a Cost curves or other allowable documents for cost justification may be used to justify costs.

^b EPA will review documentation to make sure that costs are within acceptance ranges.

^c Documentation might have information that may be used to justify cost. Cost must be project-specific and distributable among Categories.
